

**80% of passengers in Germany rely on online maps
for public transport but only 20% actually trust the
arrival times.**

**01 –
Unreliable
Arrival Times**

People can't trust when the bus will actually come. Apps show planned times, not real movement, so passengers end up guessing.

**02 – Missed
Connections**

Bad timing info leads to missed transfers. A small delay can destroy the whole route and add 10–30 minutes to a trip.

**03 – Wasted
Time at Stops**

Passengers spend too long waiting at stops. People arrive early “just in case” or wait for buses that are delayed.

Our Solution

Real-Time Urban Mobility at a Glance

Features:

- Map Data Retrieval
- Search
- Station Details
- Real Time Integration
- Scooter Layer
